## Function Ad : Pulse Delayed Relay with Control Signal

### Description

After power-up, pulsing or maintaining of control contact C starts the timing T.

At the end of this timing period T, the output R closes.

The output R will be reset the next time control contact C is pulsed or maintained.

### Function: 1 Output

## Function Ah : Pulse Delayed Relay (Single Cycle) with Control Signal

### Description

After power-up, pulsing or maintaining of control contact C starts the timing T. A single cycle then starts with 2 timing periods T of equal duration (start with output in rest position).

Output R closes at the end of the first timing period T and reverts to its initial position at the end of the second timing period T.

Control contact C must be reset in order to re-start the single flashing cycle.

### Function: 1 Output

## Function N : Retriggerable Interval Relay with Control Signal On

### Description

After power-up and an initial control pulse C, the output R closes.

If the interval between two control pulses C is greater than the set timing period T, timing elapses normally and the output R closes at the end of the timing period. If the interval is not greater than the set timing period, the output R remains closed until this condition is met.

### Function: 1 Output

## Function O : Retriggerable Interval Delayed Relay with Control Signal On

### Description

An initial timing period T begins on energisation. At the end of this timing period, the output R closes.

As soon as there is a control pulse C, the output R reverts to its initial state until the interval between two control pulses is less than the value of the set timing period T. Otherwise, the output R closes at the end of the timing period T.

### Function: 1 Output

## Function P : Pulse Delayed Relay with Fixed Pulse Length

### Description

The timing period T begins on energisation.

At the end of this period, the output R closes for a fixed time P.

### Function: 1 Output

P = 500 ms

## Function Pt : Pulse Delayed Relay (Summation and Fixed Pulse Length) with Control Signal Off

### Description

On energisation, timing period T starts (it can be interrupted by operating the Gate control contact G).

At the end of this period, the output R closes for a fixed time P.

### Function: 1 Output

$T = t_1 + t_2 + \dots$

P = 500 ms

## Function TL : Bistable Relay with Control Signal On

### Description

After power-up, pulsing or maintaining of control contact Y1 switches the output on.

A second pulse on the control contact Y1 switches the output relay off.

## Function Tt : Retriggerable Bistable Relay with Control Signal On

### Description

After power-up, pulsing or maintaining of control contact C switches output R on and starts timing T.

The output switches off at the end of the timing period T or following a second pulse on the control contact C.

### Function: 1 Output

## Function W : Interval Relay with Control Signal Off

### Description

After power-up and opening of the control contact, the output(s) close(s) for a timing period T.

At the end of this timing period the output(s) revert(s) to its/their initial state.

The second output can be either timed or instantaneous.

### Function: 1 Output

### Function: 2 Outputs

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).
