## Isolated DC-DC Converter

The 0RQB-D0W12L is an isolated DC-DC converter that provides up to 200 W of output power from a wide input voltage range (72 V, 96 V and 110 V typical).

The unit is designed to be highly efficient. Standard features include remote on/off, input under-voltage lockout, over current and short circuit protection and overvoltage protection. Conformal coated PCB is used for environmental ruggedness.

### Key Features & Benefits

- 72 / 96 / 110 VDC Input
- 12 VDC @ 16.7 A Output
- 1/4th Brick Converter
- Isolated
- Fixed Frequency
- High Efficiency
- Input Under / Over Voltage Lockout
- OCP/SCP
- Output Over-Voltage Protection
- Over Temperature Protection
- Approved to UL/CSA60950-1, 2nd +A2 version (Pending)
- Class 2, Category 2, Isolated DC/DC Converter (refer to IPC-9592B)

### Applications

- Industrial
- Railways
- Telecommunications

## 8. THERMAL DERATING CURVES

1. In order to make it convenient for safety and test engineer, each curve has 3 air velocity at most. It is better that the middle one is at the centre of minimum and maximum. For example, 0-200-400, 0-100-200, 100-200-300
2. If the minimum air velocity is 0 LFM or 50 LFM, do not mark on the curve, just record as "Natural Convection"  
Maximum junction temperature of semiconductors derated to 115°C.  
TA is the temperature on the large heatsink rib.

## 10. REMOTE ON/OFF

PARAMETER	DESCRIPTION	MIN	TYP	MAX	UNIT
Signal Low (Unit On)	Active Low	-0.3	-	0.8	V
Signal High (Unit Off)		2.4	-	18	V
Current Sink		0	-	1	mA

### Recommended remote on/off circuit for active low

Control with open collector/drain circuit

Control with photocoupler circuit

Control with logic circuit

Permanently on

## 11. REMOTE SENSE

This module has remote sense compensation feature. It can minimize the effects of resistance between module's output and load in system layout and facilitates accurate voltage regulation at load terminals or other selected point.

1. The remote sense lines carries very little current and hence do not require a large cross-sectional area.
2. This module compensates for a maximum drop of 4% of the nominal output voltage.
3. If the unit is already trimmed up, the available remote sense compensation range should be correspondingly reduced. The total voltage increased by trim and remote sense should not exceed 4% of the nominal output voltage.
4. When using remote sense compensation, all the resistance, parasitic inductance and capacitance of the system are incorporated within the feedback loop of this module. This can make an effect on the module's compensation, affecting the stability and din.
5. Recommend the connection of remote sense compensation as below figure. There are a resistor RS+ (100 ohm) from Vo+ to Sense+ and a resistor RS- (100 ohm) from Vo- to Sense- inside of this module.

6. If not using remote sense compensation, please connect sense directly to output at module's pin, that is, connect sense+ to Vo+ and sense- to Vo- at module's pin, the shorter the better. see below figure.

## 12. OCP

To provide protection in a fault output overload condition, the module is equipped with internal current-limiting circuitry and can endure current limiting for a few milli-seconds. If the overcurrent condition persists beyond a few milliseconds, the module will shut down into hiccup mode and restart once every 800mS. The module operates normally when the output current goes into specified range. The typical average output current is 0.51A during hiccup.

## 16. TRIM

### 0RQB-D0W12L Trim Resistor Calculate

Trim down test circuit

$$R_{trimdown} = \frac{V_{o\_req}}{12 - V_{o\_req}} - 1 [k\Omega]$$

Trim up test circuit

$$R_{trimup} = \frac{1 - 0.10332}{0.10332 - 1.24 / V_{o\_req}} - 1 [k\Omega]$$

**Note:**  $V_{o\_req}$  = Desired (trimmed) output voltage [V]

**Safety:**

CSA certificated to UL/IEC60950-1,2nd +A2 version  
CB certificated to IEC60950-1,2nd +A2 version
